A widely used capacitor charging and discharging circuit is represented in FIG. 1. A capacitor 10 is connected to receive an input voltage V.sub.IN, and to a first switch 12 controlled by a charging/discharging control signal 15. A capacitor 14 is connected to the input voltage V.sub.IN, to a second switch 16, and to an output voltage V.sub.OUT. The output voltage V.sub.OUT from the circuit of FIG. 1 represents the charge or voltage at the capacitor 10. The switch 16 is controlled by the control signal 15 by toggling the switch 16 to a first state 21 in response to a first control signal 17. In the first state 21, the switch 16 is turned on. In the first state 21, the capacitor 10 stores a charge that represents the 3da54e8ca3
